Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I in the reply filed on 9/19/08 is acknowledged. The traversal is on the ground(s) that since there has already been a search and examination, there would not be a serious burden. This is not found persuasive because the references now applied against group I would not necessarily be applied in the same way against the claims withdrawn as being not elected.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tessier et al. (Tessier), U.S. Patent 6,149,788 in view of Deguchi et al. (Deguchi), U.S. Patent 6,344,122.

The Tessier patent discloses the claimed method comprising passing a first water stream through a depleting compartment of an electrochemical device to produce a second water stream, passing the second water stream through a cathode compartment of the electrochemical device to produce a third water stream (see figure 2). The result claimed in claims 2, 3, 5-7 would be inherently produced by the passage of the diluted water through the cathode chamber by products electrolytically necessarily produced by the cathode.

The patent fails to disclose that the LSI is less than about 0 of the second water stream. The Deguchi patent is cited to show the steps one having ordinary skill in the art would take to reduce the SI, which is presumed to be similar to the LSI claimed (see col. 10, lines 20-42).

Consequently, the invention as whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Tessier patent with the teachings of Deguchi patent, because the Deguchi patent teaches the conventional techniques used by the ordinary artisan to lower the SI to prevent scaling.

Response to Arguments

Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (571) 272-1345. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.
